

MOVIMENTO DE PROJÉTEIS

$$a = c^{te} = g \cong 9,8m/s^2$$

In a long-jump event, 1993 United States champion Mike Powell can leap horizontal distances of at least 8 m.

MOVIMENTO DE PROJÉTEIS (CONT.)

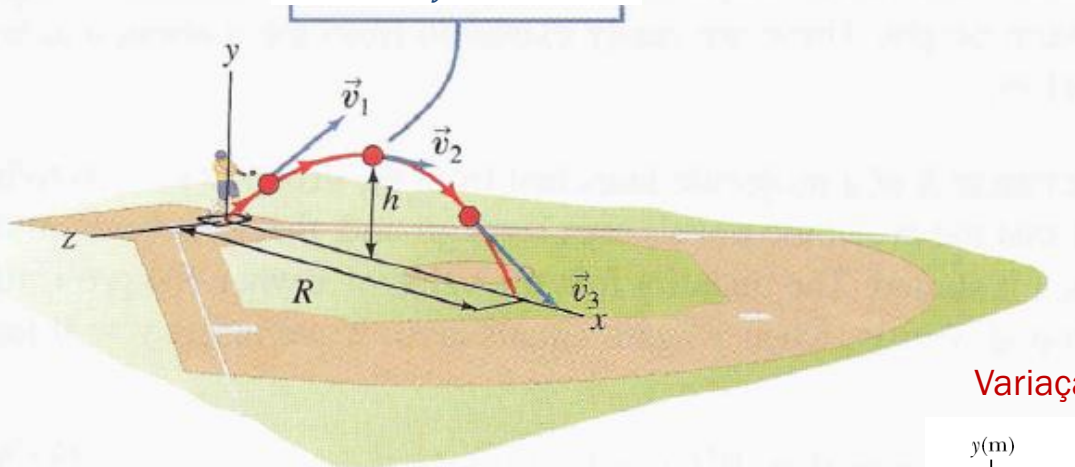

$$\begin{cases} a_x = 0 \\ a_y = -g \end{cases}$$

$$\begin{cases} v_x = v_{0x} \\ v_y = v_{0y} - gt \end{cases}$$

$$\begin{cases} x = x_0 + v_{0x}t \\ y = y_0 + v_{0y}t - \frac{1}{2}gt^2 \end{cases}$$

MOVIMENTO DE PROJÉTEIS (CONT.)

A altura máxima ocorre
quando $v_y = 0$

Variação do alcance em função do ângulo de tiro
